protection should only be used to control the residual risk during short-term activities if all technically feasible measures to reduce the hazard at the source have been observed, e.g. by restraint and/or local exhaust ventilation.

Respiratory single serving mask DIN EN 149 with filter FFP2

Hand protection

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.

Protective gloves (EN 374, EN 388, EN 420)

Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

Preventive skin protection by use of skin-protecting agents is recommended.

After use of gloves apply skin-cleaning agents and skin cosmetics.

Material of gloves

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

Choose chemical resistant gloves.

Recommend are gloves made of:

Nitrile, recommended thickness of the material: ≥ 0.11 mm

Penetration time of glove material

Penetration time 480 minutes (Permeation according to EN 374 Part 3: Level 6) e.g. for Dermatrill®
If other glove materials or protective gloves of other manufacturers are used, than the exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.

Eye/face protection

Tightly sealed goggles (EN 166)

Body protection:

Use suitable protective work clothing. Protective suit against pesticides (DIN 32781) is recommended when handling the product.
